USER INSTRUCTIONS

How to use Prompts 1 and 2 to prepare your presentation

Getting started

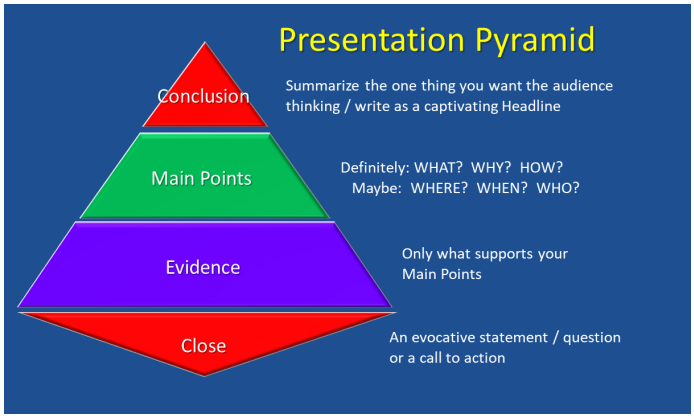

These two accompanying prompts help you move from your initial material to a focused presentation and notes you can speak from naturally. The prompts are simply two sets of instructions you give ChatGPT or Microsoft Copilot.

- Prompt #1 frames your message using the Presentation Pyramid.
- Prompt #2 converts your completed Pyramid into Masterful Notes.

You do not need to have used ChatGPT or Copilot before. The prompts contain the instructions the AI needs to apply the Presentation Pyramid and Masterful Notes. The quality of the result will depend largely on the information you provide, so be particularly clear about your audience, situation and desired outcome. **Assume the AI knows nothing about you, your organization or the presentation unless you provide that information.**

The prompts are designed to save you time and get your presentation approximately 80 to 90 percent of the way to completion. **You provide the final judgment: check the accuracy, refine the wording and make the presentation your own.**

Use both prompts exactly as provided. Do not edit them. Provide your context and any additional instructions separately, as described below.

Open ChatGPT or Microsoft Copilot

Start a new conversation. Follow these three steps:

1. **Enter your context and other information:** Type directly into the message box or copy and paste text from your document(s).
2. **Attach your files:** Attach your prompts, slides and background files using the attachment control in the message box, often shown as a plus sign or paperclip. Wait for the files to finish uploading.
3. **Press Send:** Once your context, information and files are ready, press Send.

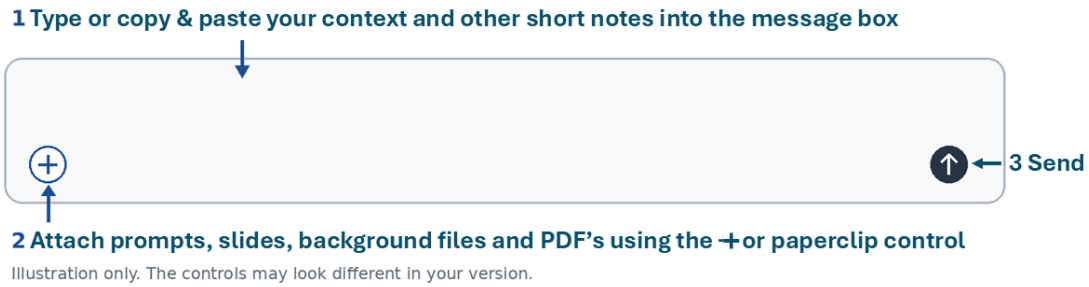

Illustration only. The controls may look different in your version.

PROMPT 1: FRAME YOUR PRESENTATION

Prompt #1 organizes your message into one clear Conclusion, supporting Main Points, Evidence for each Main Point, and a Close that reinforces the Conclusion.

Step 1: Set the context first — this is essential

Before adding Prompt #1, write a short context note. This is an essential step: the AI needs to understand your audience, situation and purpose to shape a presentation that meets your needs. A few clear lines are enough. Include:

1. **Audience**
   Who this presentation is intended for, including their role, seniority, and level of familiarity with the topic (e.g. clients, board members, investors, regulators, etc.).
2. **Context**
   The situation in which this presentation is being delivered, and why it matters now (e.g. board meeting, town hall, conference, client pitch, etc.).
3. **Tone**
   The intended delivery style and emotional posture (e.g. professional, thoughtful, confident, persuasive, reassuring, directive).
4. **Primary Focus or Lens**
   The main perspective through which the topic should be framed (e.g. strategic, operational, customer-centric, risk-aware, growth strategy, governance).
5. **Desired Outcome**
   What you want the audience to think, feel, or do differently after the presentation.
6. **Desired Length of Presentation**
   How long, in words, should your presentation be? (i.e. based on 140 to 150 words per minute)

Step 2: Add Prompt 1 and your material

Use this order: 1. Context 2. Prompt #1 3. Background material.

- Paste your context note, then paste or attach Prompt #1 exactly as provided.
- Paste or attach your draft remarks, notes, slide content, document excerpts, PDFs or images.

If attaching several files, identify their roles in your message. For example: “Use the attached Prompt #1 to frame the attached project update, using the context above.” Once everything is ready, press Send.

Step 3: Review and fine-tune the result

Check that there is one clear, single-idea Conclusion; every Main Point supports it; Evidence supports a specific Main Point; and the Close reinforces the Conclusion without introducing new ideas. Verify facts, figures and examples. Check that the result fits your context and sounds like you.

Ask for specific revisions where needed. For example: “Make the Conclusion more decisive and shorten the supporting material while preserving the key evidence.” Complete the thinking and wording before using Prompt #2.

Working with large documents

For lengthy documents, divide the material into logical sections. Use Prompt #1 on each section with the same overall context. Combine only the resulting Pyramids, then use Prompt #1 again to create one overall Pyramid. Check it against the source material for accuracy and important omissions.

PROMPT 2: CREATE YOUR MASTERFUL NOTES

The goal

Use Prompt #2 to turn your completed Presentation Pyramid into notes that help you see one idea, look up, deliver it, pause, and move on. The Pyramid locks the thinking. Masterful Notes prepare that thinking for delivery.

Step 1: Start with your completed Pyramid

Include your Conclusion, Main Points, Evidence and Close. Prompt #2 changes how your material appears on the page while preserving your message, intended order and wording wherever practical. If the message needs to change, return to Part 1 first.

Step 2: Add Prompt 2 and your Pyramid

In your next message, use this order:

1. Paste or attach Prompt #2 exactly as provided.
2. Paste your completed Presentation Pyramid immediately after it.
3. Press Send.

Step 3: Check the notes

Prompt #2 identifies natural speaking breaks based on meaning and speech rhythm—not punctuation alone. Check that:

- Each speaking line contains one naturally spoken idea and has a round bullet.
- Connected ideas are progressively indented to create a visual staircase.
- Each new major thought returns to the left-hand starting position.
- White space separates major thought groups.
- Ellipses appear selectively where they help delivery.
- Your message, Evidence and intended order are preserved.
- No important ideas have been removed or new ideas introduced.

If needed, ask the AI to correct the notes while preserving your wording and message.

Step 4: Check the final formatting

When the platform supports formatting, use:

- Arial, 14 point, with standard round bullets.
- Approximately ½ inch of additional indentation per level, normally no more than five levels.
- Approximately 1.5 line spacing, with additional space between major thought groups.
- Left alignment, with one idea per line rather than paragraphs or dense sentence blocks.

If necessary, paste the notes into Word or PowerPoint and apply these settings without changing the wording or structure.

Step 5: Practise

See one idea. Look up. Deliver it. Pause. Then move to the next idea.

Fine-tune any speaking breaks that feel unnatural, and check your timing aloud. Your judgment and practice complete the work.
